# Retained Five Years Old Extra-Uterine 26-28 Weeks Dead Calcified, Mummified, Lithopaedion Fetus

Swaroop Shyam, Srivastava O.P.

*Dept. of Surgery and Ultrasound, Balrampur Hospital, Lucknow.*

Patient 40 yrs. old, multiparous Hindu female from a village Dist. Ambedkarnagar (UP). was admitted on 19-09-1998 in the surgical Department of Balarampur Hospital, Lucknow with history of recurrent pain in lower abdomen for last one year. She also complained of irregular bleeding in between menses. The pain was colicky in nature which was relieved by simple analgesics and anti-spasmodics.

There were no symptoms pertaining to gastro-intestinal or urinary tract. Patient gave history of amenorrhoea of 7 months in the year 1993, when she had severe pain in abdomen, for which she was hospitalized and relieved after few months by conservative treatment in local hospital.

After this period of illness and treatment she had been asymptomatic except for small lump in lower abdomen.
